Android version 2.0.0 of the JTCM Agenda app is available in the play store. It was a second party re-write from C++ Builder into Delphi because C++ Builder does not support 64-bit Android apps yet and Google requires them. It is intended to be functional, **not pretty** at this point. The new app supports 32-bit devices as well.

If the existing version (1.0.0) is working for you, you can continue to use it. The older 32-bit app you can sideload from here:
https://relayman.org/temp/_0tmp/jtcm_32bit/

The following slides show how to use the new version of the app that is downloadable from the Google Play Store or you can sideload it from here: https://relayman.org/temp/_0tmp/jtcm_64bit/

Auto Update

Update Interval (minutes)   ◀ 5 ▶

Enable automatic checks for updated agenda here.

I recommend setting this **on 1 minute**. This timer only runs while you are using the app. It does not background refresh.

Click this cog icon to see this page.

Here you can select between light and dark theme, and can enable automatic agenda update checks (recommended).
